L4 ANSWER 1 OF 4 USPATFULL on STN

TI Powder particles with smooth surface for use in inhalation therapy
AB Carrier particles, for use in the preparation of powdery mixtures for administration by inhalation, and having a median diameter of greater than 90 microns and a surface rugosity expressed as the fractal dimension of less than or equal to 1.1, may be prepared by subjecting particles having a median diameter of greater than 90 microns to repeated stages of wetting with a solvent and drying.

ACCESSION NUMBER: 2005:137469 USPATFULL

TITLE: Powder particles with smooth surface for use in inhalation therapy

L4 ANSWER 2 OF 4 USPATFULL on STN

TI Powder particles with smooth surface for use in inhalation therapy
AB Carriers for use in the preparation of mixtures for inhalation powders intended for pulmonary administration of micronized drugs by means of a dry powder inhaler and the method for their preparation are described.

ACCESSION NUMBER: 2004:211450 USPATFULL

TITLE: Powder particles with smooth surface for use in inhalation therapy

L4 ANSWER 3 OF 4 USPATFULL on STN

TI Lactose spherical particles and process for their production
 AB To provide spherical particles made substantially from lactose and having high surface smoothness with low abrasiveness, and a process for their production.

A process for producing spherical particles containing at least 95 wt % lactose, characterized by comprising a step of producing lactose spherical particles by charging crystalline lactose and/or lactose granules onto a rotary disk in the treatment vessel of a centrifugal tumbling apparatus, dispersing powdered lactose to the lactose granules and/or crystalline lactose as the rotary disk is rotated while providing slit air into the vessel, while also spraying water, an aqueous lactose solution or a dilute aqueous solution of a water-soluble polymer, and a fixation treatment step of drying the obtained spherical particles in a fluidized bed apparatus while spraying an aqueous lactose solution and/or a dilute solution of a water-soluble polymer.

ACCESSION NUMBER: 1998:95284 USPATFULL
 TITLE: Lactose spherical particles and process for their production

L4 ANSWER 4 OF 4 USPATFULL on STN

TI Jet layer granulator
 AB In a granulator of the jet layer type, all the liquid jetting openings are located in a passage for a gas jetted from the gas jetting opening and each liquid jetting opening is located at a position higher than the gas jetting opening by a vertical distance smaller than the inner diameter of the gas jetting opening. The granulator may have an

additional device such as an excess size-having particle-collecting means, a five particle treating means, a rectifying pipe member, a fuffer member and a hindrance and breakage member.

ACCESSION NUMBER: 82:50241 USPATFULL
TITLE: Jet layer granulator
